

HERO[®]

PAVABALL

IMPACT OPTIMIZED DEFENSE

DESCRIPTION

PavaBall is a non-lethal¹ projectile containing lab quality, powdered PAVA, a synthetic form of capsaicin.

Comprised of a durable outer wax shell, PavaBall fractures apart on impact. The powder inside aerosolizes into a 3-6 foot cloud of powerful irritant. Targets are instantly engulfed, experiencing debilitating burning sensations and difficulty breathing. These temporary effects last up to an hour, giving the user time to escape and seek help.

PavaBall maintains reliability when stored between 0-100° F and remains effective for up to two years. Available in active and trainer rounds.

¹ When properly used as described by the manufacturer.

² Joules adjusted based on location restrictions and requirements.
